INCIDENT LIFE CYCLE AUTOMATION

Brainstorm & Idea Prioritization

Selecting the smallest useful automation scope for the project

STUDENT NAME Nareshkumar S	PROJECT **Incident Life Cycle Automation**
DOCUMENT DATE **08 October 2026**	SCOPE **Incident lifecycle workflow & automation only**

1. How Might We?

How might we automate the incident lifecycle so that incidents are captured, prioritized, owned, monitored, resolved and closed with reliable history?

2. Idea Generation

Theme	Candidate Ideas
Intake	Structured incident form; mandatory fields; automatic incident ID; source capture
Triage	Category selection; impact/urgency capture; priority rule
Assignment	Queue/owner routing; reassignment; ownership timestamp
SLA	Due-time calculation; at-risk detection; breach detection; escalation
Handling	Work notes; evidence reference; status transitions
Resolution	Resolution summary; resolved timestamp; closure confirmation
Visibility	Lifecycle timeline; dashboard; search and filters; audit history

3. Prioritized Scope

Priority	Included Work
P1 — Core	Incident intake, ID, priority, assignment, lifecycle status,

	SLA monitoring, escalation, resolution and closure.
P2 — Visibility	Dashboard/search, lifecycle timeline and audit history.
Out of Scope	Features not required to demonstrate the incident lifecycle are intentionally excluded.
