INCIDENT LIFE CYCLE AUTOMATION

User Acceptance Testing (UAT) Report

Acceptance testing for the complete incident lifecycle

STUDENT NAME Nareshkumar S	PROJECT **Incident Life Cycle Automation**
DOCUMENT DATE **08 October 2026**	SCOPE **Incident lifecycle workflow & automation only**

1. Purpose

Validate the user workflow from incident creation through closure, including ownership, SLA handling, updates and history.

2. Scope

- Incident creation and validation
- Classification and priority
- Assignment and reassignment
- Status updates and investigation notes
- SLA visibility and escalation
- Resolution and closure
- Search/dashboard and audit history
- Role-based access

Test ID	Scenario	Test Steps	Expected Result	Status
UAT-01	Create incident	Enter valid mandatory fields	Unique incident ID; state = Logged/New	Pending
UAT-02	Reject incomplete incident	Omit a required field	Validation message; incident not created	Pending
UAT-03	Assign incident	Set owner / queue	Owner and assignment time recorded	Pending
UAT-04	Update incident	Add note and change status	Timeline/history updated	Pending
UAT-05	SLA escalation	Simulate	Escalation event	Pending

		at-risk/breach condition	generated	
UAT-06	Resolve incident	Enter resolution details	State becomes Resolved with timestamp	Pending
UAT-07	Close incident	Complete closure action	State becomes Closed; history retained	Pending
UAT-08	Review audit	Open lifecycle history	Authorized reviewer can see who/what/when	Pending

3. Defect Log

Bug ID	Description	Severity	Status	Evidence
BUG-001	To be recorded during execution	—	Open / Closed	Add reproducible steps if found.
BUG-002	To be recorded during execution	—	Open / Closed	Attach evidence when applicable.

4. Sign-off

Role	Name	Date	Status
Tester	Nareshkumar S	08 October 2026	Pending
Project Reviewer	To be recorded	08 October 2026	Pending
