INCIDENT LIFE CYCLE AUTOMATION

# Problem–Solution Fit

Mapping each important lifecycle problem to a focused project capability

| STUDENT NAME | PROJECT |
|---|---|
| Nareshkumar S | **Incident Life Cycle Automation** |
| **DOCUMENT DATE** | **SCOPE** |
| **08 October 2026** | **Incident lifecycle workflow & automation only** |

| Observed Problem | Project Response | Expected Value |
|---|---|---|
| Incomplete incident details | Structured form + validation | Better-quality intake |
| Unclear ownership | Rule-based assignment + reassignment | Faster accountability |
| Inconsistent priority | Impact/urgency + priority rules | More consistent handling |
| Late SLA follow-up | Automatic timer + risk detection | Earlier intervention |
| Fragmented progress updates | Lifecycle status + timeline | Better visibility |
| Weak closure evidence | Resolution + closure fields | Complete incident record |
| Scattered history | Audit-ready lifecycle events | Traceable review |

## Fit Summary

Every selected capability directly supports the incident lifecycle. No unrelated business modules are required for the project objective.
